Summary

Software Engineer with 2+ years of experience designing and developing enterprise financial and insurance applications. Skilled in Java, Spring Boot, Angular, and PostgreSQL, with strong expertise in REST API development, backend systems, and batch job automation. Experienced in production support, debugging, and performance optimization within Agile environments.

Education

RMIT University

Masters of Information Technology

2025 - 2026
Melbourne

Experience

Cognizant - Software Engineer

Chennai, India

Aug. 2022 – Dec 2024

Client: Lincoln Financial Group (USA)

- Developed and maintained enterprise financial applications using Spring Boot in production environments
- Designed and implemented RESTful APIs to support secure transactions and customer data processing
- Developed backend modules for account and policy management, improving business workflow efficiency
- Integrated applications with PostgreSQL database and optimized queries for performance tuning
- Automated batch workflows and scheduled jobs using Autosys, reducing manual intervention
- Resolved production issues and performed debugging and performance optimization
- Followed Agile-based development practices with version control and code reviews

Client: TIAA (Teachers Insurance and Annuity Association - USA)

- Contributed to requirement analysis, design, and development of enterprise internal systems
- Translated business requirements into scalable technical solutions using Spring Boot, Angular, and Node.js
- Built and tested REST APIs and worked on system integration across multiple services
- Collaborated with business analysts and QA teams for timely and quality delivery
- Supported backend processing and batch job execution using Autosys

Software Engineer Intern

Cognizant Technology Solutions

2022

Chennai, India

- Assisted in backend development using Java and Spring Boot
- Supported RESTful API design, testing, and integration
- Worked with PostgreSQL for data operations and query handling
- Participated in debugging and issue resolution in an Agile environment

Technical Skills

Backend: Java, Spring Boot, REST APIs, Hibernate

Frontend: Angular

Database: PostgreSQL, MySQL

Tools: Git, Postman, Maven

Concepts: OOP, Microservices, Agile/Scrum

Projects & Certifications

• HomeHunt – Rental Property Management Platform

Full-stack web application for property listing, search, and rental applications using Spring Boot, Angular, and PostgreSQL.

• MelbBank – Banking Application

Built a banking system with account management, transactions, and secure authentication using Spring Boot and REST APIs.

• Web Content Summarizer (Chrome Extension)

Developed a Chrome extension to extract and summarize web content using AI APIs with backend integration via Spring Boot.

• Java & Spring boot – NIIT

• Oracle Certified Professional: Java SE 11 Developer – Oracle University
